

## VibroCounter:

Standard counter for all agricultural machinery

## RotoCounter:

Electronic hour meter for machines with PTO or devices with rotating parts

## Smart meters for agriculture:

### Your Benefits:

- Simple and reliable meters
- Exact time recording with 3-axis sensor
- Fair billing base according to real use
- Optimisation of the service intervals for operating time
- Tamper-proof by sealing the housing screws - zeroing, adjustment of settings and battery change only by visible damage of the seal possible
- Robust, one-piece plastic housing
- Protection class IP69k (high-pressure cleaner-proof)
- Made in Austria
- 5 years warranty

## NEW - AgriCounter

Hour meter

Load counter / Tank counter

Hektar meter / Distance counter

- Fair and complete billing of machine operations
- Ideal for machine rental and community machines

## AgriCounter Vibration:

### Hour meter for the separate recording of working and transport time:

- Activation by motion/vibration of the machine
- Separate summation of working time (use in the field) and travel time (travel to the field) possible by changing the position of the counter
- Hour display optionally in h:mm or h, hh
- Possibility of setting the necessary intensity of movement for activating the counting process

working position = working time

Mounting on a folding side part or chassis part

no external sensor necessary

travel position = travel time

## AgriCounter Load:

### Tank counter and hour meter for slurry tankers with level indicator and push-off trailers:

- Detecting the amount of loads with a special counting sequence via changes in position of the counter and monitoring of minimum times
- Setting options for angles, times and intensity of the necessary movement
- Activation of the hour counting by motion or vibration of the machine

Mounting directly on the level indicator or on a moving part

no external sensor necessary

## AgriCounter Drive:

### Hektar meter and hour meter for machinery and equipment with landing gear or training wheels:

- Activation by rotation of the counter
- Counts the number of rotations and optionally also the operating hours
- Setting the wheel circumference, working width and the necessary intensity of movement
- Activation of the hour counting by motion or vibration of the machine

Mounting directly on the wheel

no external sensor necessary
